
¢ni NEON CLIMB

HOW TO PLAY GUIDE

Everything you need to start climbing • v1.0 • July 2026

"The climb is eternal. The rewards are infinite. The cats never fall."

Scratch the skies. Master the neon. Play forever.

THE BASICS — GET CLIMBING IN 60 SECONDS

THE GOAL

Climb as high as possible. Don't fall off the bottom of the screen. Survive hazards, land on platforms, collect yarn and fish, and beat your personal height. That's it. The climb is endless — your only opponent is gravity and your own reflexes.

HOW THE WORLD WORKS

- The screen scrolls upward when you climb past the middle of the screen. Everything moves down to give you more space.
- Your height in meters is the main score. Higher = better. Game speed slowly increases the higher you go.
- You can only land on platforms from above (one-way). You fall through if you try to jump up from below.
- If you fall off the bottom or touch a hazard without protection → instant death. Run ends.

YOUR FIRST RUN — WHAT TO DO

1. Start on the big central platform. Get comfortable with left/right movement.
2. Jump (Space / W / ↑) and land on the platforms above you. Aim for the center of platforms.
3. When you reach the middle of the screen, the world will start scrolling down automatically.
4. Collect glowing orbs (yarn & fish) by running over them. Yarn = power-ups. Fish = permanent currency.
5. Use 1-6 number keys to spend Yarnballs on temporary power-ups when you need help.
6. Keep climbing. Try not to fall. When you die, you'll see your height and can replay your best run.

PRO TIP

You have a short 'coyote time' window after walking off a platform and a 'jump buffer' if you press jump slightly early. The game is forgiving on time.

CONTROLS — KEYBOARD & GAMEPAD

KEYBOARD

Move Left/Right:	Arrow Keys • A / D
Jump:	Space • W • ↑ Arrow
Dash:	Shift (directional)
Fire Laser:	E
Pause:	Esc • P
Power-ups:	Number keys 1 — 6

GAMEPAD

Move:	Left Stick • D-Pad
Jump:	A Button • B Button
Dash:	RB • Y Button
Fire Laser:	X Button • Right Trigger (RT)
Pause:	Menu / Options button
Power-ups:	Face buttons or D-Pad (see in-game)

DASH & LASER — YOUR TWO CORE TOOLS

- Dash (Shift / RB / Y): Quick horizontal burst in the direction you're moving (or right if standing still). Great for crossing gaps, dodging hazards, or recovering from bad jumps. Has a short cooldown.
- Laser (E / X / RT): Fires a forward beam that destroys hazards and can collect items in a line. Excellent panic button when things get chaotic. Also has a cooldown.

GOD SKIN FLIGHT (ADVANCED)

If you're using the God cat skin, hold Jump while in the air to spend energy and fly upward. Energy recharges while you're on solid ground or climbing. This completely changes movement and is the highest skill-ceiling skin in the game.

PLATFORM TYPES — KNOW YOUR SURFACES

All platforms are one-way (land only from above).

SPECIAL PLATFORMS (marked with white/neon lines or patterns)

- SLOW (purple) — Your speed is reduced. Good for precision.
- FAST (mint) — Speed boost. Easy to overshoot.
- BOUNCE (yellow) — Launches you upward. Chain them for big height.
- CRUMBLE (orange) — Collapses after ~5 seconds of standing on it.
- ICE (cyan) — Very slippery. High speed but hard to control.

White lines = special effect platforms (Slow / Fast / Bounce / Crumble / Ice). Normal platforms have none.

HAZARDS & COLLECTIBLES

WHAT KILLS YOU

- Falling off the bottom of the screen (most common death)
- Comets — glowing circles with tails falling from above
- Shards — fast rotating diamond-shaped hazards
- Spikes and deadly geometry
- Large gaps between platforms

COLLECTIBLES — YARN & FISH

- Yarnballs (■): The main currency for the Yarn Shop. Used to buy temporary power-ups (1-6). Collect these aggressively — they are your safety net.
- Fishbones (■): Permanent currency. Spent in the Fishbone Workshop on upgrades that carry across runs. Also convertible into Yarn if you need a quick power-up injection.

Both float above platforms. Some platforms have higher chances of spawning fish. Magnet power-up makes collection much easier.

POWER-UPS (YARN SHOP) — PRESS 1-6 IN RUN

- Magnet (1): Pulls nearby yarn and fish toward you. Essential on crowded or fast sections. Cosmic skin has this passively.
- Double (2): Doubles your score gain or jump effectiveness for a short time.
- Triple (3): Even stronger multiplier or effect burst. Use when you're in a good flow.
- Shield (4): Gives you an extra hit / protection. Diamond skin can recharge this by collecting yarn.
- Freeze (5): Slows time or freezes hazards temporarily. Great panic button when things get overwhelming.
- (6) Revive: Gives you a second chance if you would have died. The ultimate safety net for pushing for new bests.

COSMETIC SKINS & SPECIAL ABILITIES

Unlock and equip different cats in the Cosmetics shop. Each one changes how the game feels and plays.

■ NEON (Default)

Clean, standard movement. Great all-rounder to learn the game on.

■ COSMIC

Passive wide magnet effect. Makes collecting yarn and fish much easier. Excellent beginner/intermediate skin.

■ DIAMOND

Facet Shield that blocks one hit and can be recharged by collecting yarn. Great for pushing high scores safely.

■ GLITCH

Special glitch charge ability — burst invulnerability or dash reset potential. Techy, chaotic fun.

■ GOD

Hold jump in the air to fly using energy (recharges on ground). Completely changes movement. Highest skill ceiling — master this for god-tier runs.

■ LASER

Enhanced or faster-charging laser. Turns the laser into a more central part of your toolkit.

■ SANDY

Lower gravity. Floatier jumps and different momentum. Changes the feel of every platform type.

ADVANCED TIPS FROM THE DEV TEAM

- Bounce chaining is the fastest way to gain height. Time your jumps to hit the next bounce platform at the peak of your launch.
- Ice platforms + dash = insane horizontal speed. Use them to cross big gaps, but be ready to correct with another dash or laser.
- God flight is strongest when you save energy for big vertical sections rather than using it constantly.
- Save your best power-ups (Shield, Revive, Triple) for when you're already high and pushing for a new personal best.
- Watch your replay after a good run. You'll see exactly where you can improve timing or positioning.
- The combo system rewards consistent, clean play. Try to avoid unnecessary dashes or risky jumps when you're in a good flow.

REPLAYS, PROOFS & SETTINGS

REPLAY YOUR BEST RUNS

After any run (especially good ones), you can watch a full replay of your best height attempt from the Game Over screen. Speed controls let you watch at 0.5×, 1×, 1.5×, or 2× speed. This is the best way to improve — study your own movement and see exactly where you lost height or missed opportunities.

PROOF & VERIFICATION

Neon Climb has a built-in proof system. You can export watermarked screenshots or use the Verify Proof screen to upload runs. This protects legitimate high scores and lets the community trust what they see. If you set an insane new record, prove it — the system is designed for that.

SETTINGS — MAKE IT YOURS

- Colorblind Hazards: Swaps hazard colors to high-contrast blue. Highly recommended if you have any color vision differences.
- Low-VFX Mode: Reduces particles and screen shake. Cleaner look, sometimes easier to read.
- CRT / Scanlines: Adds retro monitor effect. Purely cosmetic — turn on if you love the aesthetic.
- Compact HUD: Smaller ability cards and less screen clutter.
- Music / SFX Volume + Mute options: Full audio control.
- Dev Mode (hidden): Unlocks everything and removes cooldowns for testing. Not for normal play.

NOW GO CLIMB.

The neon is waiting. The platforms are moving. Your cat is ready.

See you at the top.
